I am writing to provide a professional review of the CenoBots units currently in use at our facility. Overall, our experience has been very positive. I would confidently endorse them for consideration by other agencies.

The CenoBots have proven to be highly useful in supporting our operations here at Space Center Houston. Their functionality aligns well with our needs. This has allowed us to integrate them into our daily workflow with minimal disruption to guest experience. From an operational standpoint the units are intuitive and easy to use. This has allowed our custodial team to adopt them quickly without extensive training.

Based on our experience I believe that CenoBots offer a reliable and user-friendly solution that can provide value across a variety of operational environments. We appreciate the opportunity to utilize this technology and would recommend it to others by evaluating similar systems.

Very Respectfully,

Ethan Stark
Manager of Facility Operations
